Is your 911 system
infrastructure in a
state of emergency?

Get your program off the ground.

With the cancellation of the Statewide Wireless Network (SWN) project, many communities are wondering how they will complete critical upgrades to their emergency communications system infrastructure. Starting this process, going in the right direction, and seeing it thru to completion in today's era of diminishing resources is a challenge.

Having served dozens of communities on communications and complex public infrastructure projects, C&S can provide sound management and guidance in the rehabilitation of emergency communications systems.

C&S has extensive experience with the planning, design and construction of over 1,500 communications facilities nationwide for both municipal and private sector clients.

"C&S has been a tremendous asset to our county in upgrading our public safety telecommunications system, which is the largest capital project that Madison County has ever undertaken".

-Director, Madison County, NY, 911

Before you move forward with improvements to your emergency communications system infrastructure, contact C&S to ensure your program gets off the ground.
