PROPOSED PROJECT

The Ithaca Tompkins International Airport (ITH) has proposed to construct a new combined Airport Rescue and Fire Fighting (ARFF) and Snow Removal Equipment (SRE) building. The building will be located between the Airport Passenger Terminal Building and fuel farm at the Ithaca Tompkins International Airport, located at 781 Warren Road, Ithaca, New York.

The building requires new stormwater drainage features, including two outfalls, or discharge points through which stormwater is collected and discharged during large rain events. These outfalls will discharge stormwater from areas surrounding the new building, including parking lot pavement and limited grassy areas. To implement the proposed project, Tompkins County has applied for a modification to the Airport's existing State Pollutant Discharge Elimination System (SPDES) Permit for the addition of new stormwater discharge features to the New York State Department of Environmental Conversation (NYSDEC). The outfalls must be added to the existing Airport facility SPDES permit for monitoring purposes under the NYS SPDES regulations. As part of the SPDES Discharge Permit application review process, Tompkins County has prepared a Public Participation Plan (PPP) in accordance with the NYSDEC Commissioner Policy 29, Environmental Justice and Permitting (CP-29).
